

# The William J. Hughes Technical Center

INVITES YOU  
to the

## **“SPEAKERS SERIES”**

***Mr. Ernie Pappas***

### **Topic**

***Photography and Seeing  
Reflections of a Professional Photographer***

Life seen through the camera, some highly memorable events at the Technical Center and the technology of photography will be the subject of this presentation.

Mr. Pappas is the third generation of photographers in his family. Although Ernie has had some formal training, he is mainly self taught. Prior to joining the FAA, Ernie worked with the National Geographic Society as a laboratory photographer. During his time there worked on projects or original works of Alexander Graham Bell, Jaques Cousteau, Dr. Leaky, the famed anthropologist, and Jane Goodall who studied the wild chimpanzees. He also met Sir Edmond Hillary at the labs. He has also worked on National Geographic books such as the Living White House and a Presidential Daughter's White House Wedding. He is a commercial photographer and a fine art photographer whose works have been exhibited. Ernie is also an active member of the American Society of Media Photographers.

Join us to hear about the what photography really is, the current sate of digital and film media as well as what the digital engineers are telling us. Learn how to buy a camera and software and get some tips on how to use them.

Learn some practical techniques on shooting bay pictures and children, loved ones and family, portraits, pets, scenery, and industrial images.

To make this presentation even more enticing, Ernie has promised a surprise photo of a memorable Tech Center Event.
